

## Appendix 1: ShareInvestor.com Portal Features

### **Enhanced Search Function**

The Global Search Box reduces the time taken to access the information required to make trading decisions and thereby allows investors to convert time into money. Stock quotes have been added into the search results generated from the Global Search Box to keep investors updated on the current share price. Additionally, the “Related Topics” tab can now be expanded to prevent investors from missing out on certain information.

### **Stock monitoring**

The Intraday Market Ticker allows momentum traders to search for intraday trading action by displaying the significant trades of all the stocks listed on the stock exchange in a single time-and-sales ticker. The total number of quotes has also been increased from 20 to 100 so investors can now track significant trades for a longer period of time and hence better read the market.

A new feature, Stocks Comparison, allows investors to compare the fundamentals and financial ratios of up to 6 stocks and warrants at a time to aid them in making informed investment decisions.

### **Stock portfolio**

The Stock Portfolio integrates the latest financial news and corporate actions related to each investor’s stocks, enabling investors to track the performance of their individual investment holdings in real-time. Investors can now sort their stocks alphabetically or reposition them through a drag-and-drop function. They will also have control over the Auto-Refresh interval for static trading data as well as the column layouts for the price and portfolio page, giving investors a more personal user experience.

### **ShareInvestor Forum (SI Forum)**

Forum threads are managed by the administrator and arranged in alphabetical order of the stock name. Not only does this prevent duplication and accidental deletion of stock threads, it also ensures that investors are able to find the information they require easily and quickly.

Real-time stock prices are also embedded into forum threads to keep investors updated on the latest stock price whilst reading forum posts.
